Experienced Front-End Developer with 5 years in Angular and Electron JS, specializing in performance optimization, system design, and building secure, scalable web and desktop applications. Proficient in troubleshooting, agile collaboration, and delivering production-grade solutions. Eager to leverage expertise in front-end development to drive business success.

KEY SKILLS

Technical Acumen

- 1. Programming Languages:** JavaScript, TypeScript, Java, Python.
- 2. Framework & Libraries:** Angular2+, Electron JS, Spring Boot, FastAPI
- 3. Tools and Platforms:** Git, OpenShift, Harness, Jira.
- 4. Unit Testing:** Karma-Jasmine, JUnit.

Soft Skills

1. Planning and Structuring
 2. Agile Team Participation
 3. Software Development Principles
 4. Leadership Potential
-

PROFESSIONAL EXPERIENCE

Application Development Programmer Analyst 2
Citi Corp.

April 2025- Present

Worked on enterprise applications in the Capital Markets domain, building scalable solutions using Angular, Python, FastAPI, Java Spring Boot, MongoDB, Kafka, and Palantir Foundry. Quickly adapted to Foundry and independently owned end-to-end development, deployment, and production support – including full ownership of critical applications and microservices.

Roles & Responsibilities

- Designed and developed an end-to-end hierarchical taxonomy engine for Wealth Product Taxonomy (WPT) classification, initially prototyped using Python, FastAPI, MongoDB, and Angular.
 - Independently re-architected and delivered the engine as two production-grade Java Spring Boot microservices – classification and enrichment services – with Kafka-based real-time streaming, AppDynamics monitoring, and OpenShift deployment.
 - Built and maintained multiple applications in Palantir Foundry, handling development, testing, deployment, and support activities.
 - Took complete ownership of the Security Onboarding application on Palantir Foundry, independently managing development, deployment, and production support end-to-end.
 - Quickly upskilled in Palantir Foundry and independently managed production-ready solutions within a short span.
 - Contributed to shared UI component libraries and reusable frontend modules to improve consistency and development efficiency across applications.
 - Contributed to a Git Diff Tracker initiative to identify configuration and code changes between releases, helping teams track critical updates efficiently.
-

Designed and delivered high-quality, secure applications using Angular and ElectronJS, enhancing user experience and application performance. Led technical troubleshooting and performance optimization, identifying patterns to improve system stability and architecture.

Roles and Responsibilities:

Code Review & Leadership

- Led code reviews to ensure coding standards, architecture compliance, and maintainable code quality.
- Contributed to quarterly PI planning by defining scope, prioritizing user stories, and aligning features with business goals.

Achievements

- Received Insta Awards for strong client engagement and performance.
- Earned outstanding ratings during yearly performance reviews.

Proof of Concepts (POCs)

- Built Angular POCs for Service Workers, reducing application downtime by 26%.
- Implemented performance monitoring using Datadog, Lighthouse, and optimization techniques, improving performance by 31%.
- Developed IndexedDB logging using Dexie and File APIs, improving log accessibility and efficiency by 8%.

Electron.js Expertise

- Packaged Electron apps into MSI/EXE installers for Windows deployment, improving usability by 80%.
 - Implemented auto upgrade/downgrade deployment strategies for seamless application updates and rollbacks.
 - Developed file logging systems for debugging and performance analysis.
 - Explored Electron Release Server with PostgreSQL and Docker for automated deployments.
-

Gained valuable hands-on experience in the MERN (MongoDB, Express.js, React.js, Node.js) stack, focusing on full-stack web development.

Accomplishments:

- Developed responsive and user-friendly frontend interfaces using React.js, enhancing user experience and interaction.
 - Demonstrated adaptability and learning agility by quickly grasping new concepts and technologies essential to project requirements.
-

CERTIFICATIONS

- Infosys Certified Front-End Web Developer
 - MongoDB SI Associate Certification
 - FastAPI - Udemy
 - Palantir Foundry Software Development Essentials
-

EDUCATION

Bachelor of Engineering (2017 - 2021) - St. Joseph's Institute of Technology
CGPA - 8.5
